Clinical and Integrative Gastrointestinal Pathobiology Study Section [CIGP]

[\[CIGP Membership Roster\]](#) [\[CIGP Meeting Rosters\]](#)

The Clinical and Integrative Gastrointestinal Pathobiology [CIGP] Study Section reviews applications concerned with basic and clinically-oriented research related to the gastrointestinal (GI) system, motility, brain-gut interactions, enteric nervous system, motor disorders, acid secretion and acid related disease, GI hormones, pancreatic function and dysfunction, digestive system nutrient absorption, malabsorption/malnutrition, nutritional support, integrative GI physiology, genetic determinants of digestive diseases and digestive system patient-oriented research.

Specific areas covered by CIGP are:

- GI motility, neurotransmitters, brain-gut interactions, enteric nervous system. GI hormones, transmitters, and their actions. Acid secretion and acid related disease.
- Fluid and electrolyte transport, diarrhea and constipation. Digestive system nutrient absorption and disposition, malabsorption/ malnutrition.
- Exocrine pancreas function and dysfunction, therapy for genetic and acquired pancreatitis.
- Integrative GI physiology: Studies ranging from normal physiology to mechanisms and consequences of disease. Genetic determinants of digestive diseases, including increased risk of disorders of the digestive tract, inherited metabolic disorders, gene-gene interactions, genetic risk assessment and gene-environment interactions.
- Patient-oriented research. Studies of risk factors, etiology, detection, screening, modifying factors and therapy of GI diseases and disorders. Clinical, population and integrative, studies of the responses of the digestive system to trauma or surgery and digestive system ischemia/reperfusion injury.

## Cellular and Molecular Biology of the Kidney Study Section [CMBK]

[\[CMBK Membership Roster\]](#) [\[CMBK Meeting Rosters\]](#)

The Cellular and Molecular Biology of the Kidney [CMBK] Study Section reviews grant applications involving basic and applied aspects of normal and abnormal renal physiology, cell biology, transport biology, including osmoregulation and osmosensing, hormone action and signal transduction, vascular biology, genetic disorders, cell-matrix interactions, biophysics, and bioenergetics.

Specific areas covered by CMBK:

- Molecular biology and physiology of transport relevant to renal function and disease including inherited abnormalities and the pharmacology of kidney function.
- Protein metabolism and cell polarity relevant to the function of the kidney.
- Disorders of tubular epithelial and endothelial cells as they relate to kidney diseases.
- Identification and characterization of genes that cause kidney diseases in humans and animal models. Including the pathophysiology and cellular and molecular consequences of genetic disorders (including polycystic kidney disease and disorders of tubular function).
- Integrated aspects of disordered fluid, electrolyte, and acid-base homeostasis resulting from abnormalities in the transport systems; blood pressure and extracellular fluid volume homeostasis causing hypertension.

[Cellular Signaling and Regulatory Systems \[CSRS\]](#)

## Gastrointestinal Cell and Molecular Biology Study Section [GCMB]

[\[GCMB Membership Roster\]](#) [\[GCMB Meeting Rosters\]](#)

The Gastrointestinal Cell and Molecular Biology [GCMB] Study Section reviews applications pertaining to cell and molecular biology of gastrointestinal and liver function under physiologic and pathophysiologic states. Studies using cellular, molecular, genetic, structural, biochemical, electrophysiological and pharmacological approaches to define mechanisms and pathways of gastrointestinal (GI) and liver growth, differentiation, development, in humans or model organisms are considered.

Specific areas covered by GCMB:

- Regulation of mechanisms of gene expression at the transcriptional and posttranscriptional levels.
- Mechanisms of development and growth/differentiation control of all cell types in the GI tract and liver. Stem cell biology.
- Molecular physiology of ion channels, pumps and transporters. Molecular mechanisms of GI and liver secretion or absorption. Intracellular signaling pathways in response to endogenous and exogenous stimuli, and intracellular trafficking. Mechanisms of apoptosis, oxidative stress and aging. Epithelial cell biology and barrier function, extracellular matrix- and cell-cell interactions, epithelial repair, regeneration and adaptation.
- Genetic basis of GI diseases, structure/function analysis of disease-causing genes, genotype-phenotype correlation, gene and somatic cell therapy.
- GI and liver dysplasia and pre-neoplasia, mechanisms of transformation; immortalization and mutagenesis.

**Study sections with most closely related areas of similar science listed in rank order are:**

## Gastrointestinal Mucosal Pathobiology Study Section [GMPB]

[\[GMPB Membership Roster\]](#) [\[GMPB Meeting Rosters\]](#)

The Gastrointestinal Mucosal Pathobiology [GMPB] Study Section reviews applications involving gastrointestinal immunology, host-microbial interactions, intestinal infections, inflammation including inflammatory bowel diseases, and epithelial cell biology as it relates to mucosal defense or repair. Approaches may utilize in vitro systems, animal models, or research involving human samples and systems. Emphasis is on basic and translational approaches to mucosal pathophysiology.

Specific areas covered by GMPB include:

- GI mucosal immunology including both innate and adaptive immunity.
- Mechanisms of acute and chronic intestinal inflammation as they relate to pathogenesis. Basic and clinical studies in human inflammatory bowel disease, gluten sensitive enteropathy, auto-immune gastritis, other types of immune-mediated gastrointestinal diseases, necrotizing enterocolitis, and the immune responses to GI infections. Dysplasia and pre-neoplasia as a consequence of chronic GI infection or inflammation.
- Interactions between the microbiota and gastrointestinal mucosa including the effects of pathogenic bacteria (including but not limited to *H. pylori*, *Salmonella* and pathogenic *E. coli*), commensal bacteria, and probiotics.
- Gastrointestinal cell biology and barrier function in health and disease.
- Mechanisms of tissue injury and repair. NSAID-induced gastrointestinal injury and response to alcohol or other toxicants.

[Gastrointestinal Cell and Molecular Biology \[GCMB\]](#)

## Hepatobiliary Pathophysiology Study Section [HBPP]

[\[HBPP Membership Roster\]](#) [\[HBPP Meeting Rosters\]](#)

The Hepatobiliary Pathophysiology [HBPP] study section reviews applications involving pathophysiology and treatment of inherited and acquired viral and non viral hepatobiliary diseases; mechanisms of liver injury, repair, regeneration, and transplantation; liver cell biology, immunology and inflammation; cholesterol and bile salt metabolism; hepatobiliary transporters and ion channels; and alcohol metabolism and disease.

Specific areas covered by HBPP:

- The use of isolated parenchymal and non-parenchymal cells of the liver as they relate to the pathogenesis of liver disease and progenitor cell therapy of genetic and acquired hepatobiliary diseases.
- Mechanisms of bile formation, bile salt synthesis and cholestasis; mechanisms of hepatic cholesterol and lipid metabolism and regulation of lipoprotein genes; physiologic mechanisms of hepatobiliary transport.
- Inflammatory response of the liver to injury or infection and mechanism of hepatocyte injury including immune response, oxidative stress, apoptosis, pro- and anti-inflammatory mediators. Signal transduction pathways and neuromediators.
- Liver injury, repair, regeneration, development, and transplantation. Liver ischemia-reperfusion injury and regulation of splanchnic blood flow as it pertains to mechanisms of portal hypertension.
- Cellular and molecular mechanisms, gene regulation, pathogenesis, and treatment of liver diseases, such as, fibrosis and cirrhosis; cholangiopathies; gallstones and gallbladder disease; viral hepatitis as it relates to the pathogenesis of hepatobiliary disease; non-alcoholic fatty liver and alcoholic liver diseases.

**Study sections with most closely related areas of similar science listed in rank order are:**

[Virology B \[VIRB\]](#)

## Pathobiology of Kidney Disease Study Section [PBKD]

[\[PBKD Membership Roster\]](#) [\[PBKD Meeting Rosters\]](#)

The Pathobiology of Kidney Disease [PBKD] study section reviews grant applications involving basic and clinical studies of kidney disease, investigations of pathophysiology, diagnosis, consequences and treatment of acute and chronic disorders of the kidney, the consequences of kidney disease and failure, as well as, studies of the normal structure and function of the glomerulus.

Major areas of focus covered by PBKD include:

- Normal structure and function of the glomerulus and its constituent cells; glomerular-related diseases, and renal fibrosis
- Mechanisms and consequences of acute kidney injury/acute renal failure and toxic injury to the kidney.
- Studies on basic and clinical aspects of kidney ablation, chronic allograft nephropathy, allograft rejection/tolerance, and prevention and/or treatment of rejection.
- Diabetic nephropathy, nephrotic syndrome, proteinuria, complications and management of uremia, and renal replacement therapies.
- Vascular biology of the kidney and renal hemodynamics; the role of the kidney in the regulation of blood pressure and in the development of hypertension.

## Xenobiotic and Nutrient Disposition and Action Study Section [XNDA]

[\[XNDA Membership Roster\]](#) [\[XNDA Meeting Rosters\]](#)

The Xenobiotic and Nutrient Disposition and Action [XNDA] Study Section reviews applications related to the disposition of xenobiotics and supraphysiologic (SP) levels of nutrients, and the study of their mechanisms of action in normal and pathological conditions of the digestive system, as well as in multi-organ systems.

Specific areas covered by XNDA:

- Gastrointestinal and/or hepatic disposition of xenobiotics and SP nutrients, including processes of absorption, biotransformation, distribution and excretion.
- Structure-function relationships for enzymes/transporters/receptors involved in SP nutrient and/or xenobiotic disposition and effects.
- Role of genetics and genomics in disposition and effects of SP nutrients and xenobiotics. Theoretical, mechanistic, and/or integrated studies of kinetics and/or dynamics of SP nutrients and xenobiotics.
- In vitro and in vivo models that study the molecular basis of gene-environment interactions related to the digestive system or multi-organ systems.
- Mechanisms of action of xenobiotics and SP nutrients, including toxicological and/or pharmacological effects on the digestive system or multi-organ systems.

## Urologic and Kidney Development and Genitourinary Diseases Study Section [UKGD]

[\[UKGD Membership Roster\]](#) [\[UKGD Meeting Rosters\]](#)

The Urologic and Kidney Development and Genitourinary Diseases [UKGD] study section reviews applications concerning physiologic and pathophysiologic processes of the lower urinary tract, male reproductive organs, female pelvic floor, urolithiasis, and basic processes underlying upper and lower genitourinary organ development.

Major areas of focus covered by UKGD include:

- Function and dysfunction of the bladder, ureter, and urethra or their component tissues. Microbial infection and inflammation in the urinary tract. Urolithiasis.
- Function and dysfunction of the prostate. Male sexual function: physiology of penile erection, pathophysiology and treatment of erectile dysfunction.
- Normal and abnormal development of the upper and lower genitourinary tract.
- Pediatric urological conditions: hydronephrosis and congenital anomalies of the penis, bladder and ureter.
- Urogynecology: pelvic floor tissues in health and disease.

## Systemic Injury by Environmental Exposure [SIEE] Special Emphasis Panel [DKUS (90)S]

The Systemic Injury by Environmental Exposure (SIEE) Special Emphasis Panel reviews applications related to the pharmacological and toxicological mechanisms whereby xenobiotics affect distinct organ systems, other than the digestive and nervous systems. Specifically, SIEE reviews applications related to the cardiovascular, musculoskeletal, hematopoietic, renal, respiratory/pulmonary, immune, endocrine and reproductive systems. Other areas included are skin, oral, dental and craniofacial tissues, pregnancy and development.

Specific areas covered by SIEE:

- Mechanisms of action of xenobiotics, including toxicological and/or pharmacological effects.
- Development of animal models that study the effects of xenobiotics.
- Molecular basis for susceptibility to xenobiotics-induced toxicity and disease (e.g., pharmacogenetics, pharmacogenomics, toxicogenetics, toxicogenomics).
- Identification of biomarkers of xenobiotics-induced toxicity.

**Study sections with most closely related areas of similar science listed in rank order are:**

## Digestive Sciences Small Business Activities [SBIR/STTR] Special Emphasis Panel [DKUS (10)]

### [\[SBIR/STTR Roster\]](#)

Specific areas covered by the DKUS (10) Small Business SEP:

In the Digestive, Kidney and Urological Systems [DKUS] Integrated Review Group, the Digestive Sciences Small Business Activities Special Emphasis Panel [DKUS (10)] will consider SBIR and STTR research applications that focus primarily on digestive system diagnostics, devices and therapies, and on the disposition and action of nutrients and xenobiotics. Investigators may employ a range of approaches that include genetics, genomics and proteomics, molecular, cell, and computational biology, biochemistry, biophysics and bioengineering, imaging, analyses of model organisms, and human studies.

## Renal and Urological Sciences Small Business Activities [SBIR/STTR] Special Emphasis Panel [DKUS (11)]

### [\[SBIR/STTR Roster\]](#)

In the Digestive, Kidney and Urological Systems [DKUS] IRG, the Renal and Urological Sciences Small Business Activities Special Emphasis Panel [DKUS (11)] will review SBIR and STTR grant applications that focus primarily on kidney, urinary tract, and male genital system therapies, devices, and diagnostics. This includes clinical, translational and fundamental studies and investigators may employ a range of approaches that include genetics, genomics and proteomics, molecular, cell, and computational biology, biochemistry, biophysics and bioengineering, imaging, analyses of model organisms, and human studies.

Specific areas covered by the DKUS (11) Small Business SEP:

- Development and evaluation of new techniques for investigating, diagnosing and treating disorders of the kidney, urinary tract, and male genital system.
- Development of new techniques and evaluation of the efficacy of dialysis.
- Application of new technologies and methodologies to the diagnosis and treatment of urologic diseases.
- Novel approaches to regeneration and tissue engineering of the kidney, urinary tract and male genital system.
- Clinical assessment of genitourinary diseases including urinary incontinence and pelvic floor dysfunction

**Study Sections with related interests may be found in:**
